

ABOUT

The International Research Network ‘Polyoxometalates: smart molecular oxides’ (IRN-POM) is a tool primarily funded by the Centre National de la Recherche Scientifique (CNRS) and supported by partner institutions on a voluntary basis to underpin European POM Research. This second version of the IRN (**2024-2028**) has several objectives:

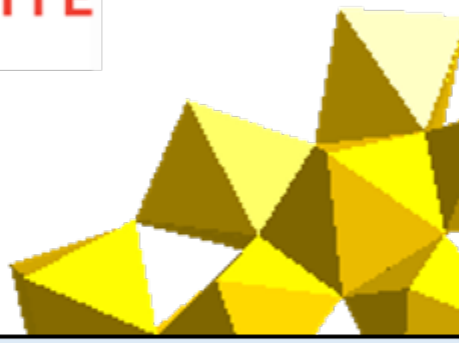

- to boost research, innovation and carriers of young and talented researchers,
- to structure the POM community, pushing back the frontiers of POM applications through external advisors, expert in their own field,
- to prepare joint proposals to respond to European calls dedicated to the cover of expenses of the networking activities: COST Action and MSCA Staff Exchange being targeted funding instruments.

The IRNPOM is organized in four working groups (WGs).
