

ABOUT

The International Research Network 'Polyoxometalates: smart molecular oxides' (IRN-POM) is a tool primarily funded by the Centre National de la Recherche Scientifique (CNRS) and supported by partner institutions on a voluntary basis to underpin European POM Research. It aims at strengthening collaborations, combining complementary expertise and knowledge and sharing of equipment. It also aims at enlarging partnerships beyond the POM community to sustain actual trend toward more applicative domains targeting important societal issues in the field of renewable energy, environment and data

storage and processing. The IRNPOM is organized in four working groups (WGs).
